

## ABSTRACT

Disclosed is a curtain wall system used for building exteriors. The curtain wall system includes at least one vertical mullion and at least one horizontal sill member. Either the vertical mullion, the horizontal sill member, or both are formed to include a channel of increased depth to facilitate the receipt of a panel member therein. The panel member is secured with a bonding agent. The channel of the vertical and horizontal mullions may be oriented near at least one of a front edge and a back edge or substantially near a center of the vertical mullion and horizontal sill member. This Abstract is provided to comply with rules requiring an Abstract that allows a searcher or other reader to quickly ascertain subject matter of the technical disclosure. This Abstract is submitted with the understanding that it will not be used to interpret or limit the scope or meaning of the claims. 37 CFR 1.72(b).
